EDUCATION

Bachelor of Electronics and Communication Engineering, Zagazig University

09/2020 – 07/2025

PROJECTS

Car Parking Dashboard (Grad project ,Score:198/200),

Technologies: React.js, Firebase (Firestore/Firebase Auth), SASS 🌐

- Developed a real-time parking management dashboard to optimize space utilization and revenue tracking. The system provides live insights into occupancy trends, payment methods, and peak-hour analytics for improved decision-making.
- Built a responsive, interactive UI with React.js using functional components and React Hooks
- Implemented dynamic data visualization using chart libraries (e.g., recharts and mui) to display parking occupancy and revenue
- Integrated Firebase for seamless data fetching, enabling live updates on occupancy, revenue, and peak hours.

Movies Website, *Technologies: React.js, Tailwind CSS, TMDb API* 🌐

- Developed a responsive movie discovery platform with real-time data fetching from TMDb API
- Implemented dynamic search and filtering functionalities, improving user experience with instant results
- Designed an intuitive UI with Tailwind CSS, achieving 100% mobile responsiveness across devices
- Used React Router for enabling seamless navigation between movie listings, search results, and detail pages without page reloads

React Sushi Restaurant Website, *Technologies: React, TypeScript, Tailwind CSS, Firebase, Redux* 🌐

- Developed a responsive restaurant website with React and TypeScript, implementing modern UI components
- Styled with Tailwind CSS for utility-first responsive design across all devices
- Implemented Firebase Authentication for secure user sign-up/login flows
- Built Redux-powered cart system with persistent state management using Redux Toolkit

SKILLS

Languages: JavaScript, HTML, CSS, SQL (MySQL), Shell Scripting

Frameworks & Libraries: React.js, React Native, Node.js ,Next.js Tailwind CSS, Sass

Tools & Platforms: Git, Docker, Linux

CERTIFICATES

Frontend Engineering with React 🌐

Databases 🌐

Introducing Generative AI with AWS 🌐
